Subli - Light Instructions

Introduction
Subli-Light is a transfer paper that allows you to dye sub onto white or light coloured garments made from cotton, polyester or nylon.

Artwork
The **Subli-Light** sheets work with full tone block colours.

IMPORTANT
It is not suitable for half tones, photographs or anything with a graduated colour.

Mirror your image prior to printing.

Printing
Print onto the sheet using your Sawgrass SG400 or SG800 printer and genuine Sawgrass dye sublimation inks. After printing press the sheet immediately.

Before Pressing
If you have a Teflon cover / skirt on your heat press remove it. Turn on your heat press and set to **170°C** for **30 seconds**.

Close your heat press to heat up the lower platen. When complete release press.

Put the garment on the lower platen and press for 5 seconds to warm it up.

Pressing
Place the printed **Subli-Light** sheet onto the garment and press for 20-30 seconds

Release the press and remove the **Subli-Light** sheet within 2 seconds, **before** you remove the garment from the lower platen.

Finishing
Whilst the garment is now ready you can increase the wash life of the garment by now sealing with the **Matt Finishing** or **Gloss Finishing** sheet.

Place garment on the heat press and cover with chosen **Finishing Sheet** and press for **30 seconds** at the same temperature as above.

Washing
Garments can we washed at up to **30°C**.

Ironing
Place a piece of silicone paper over the print if ironing.
